AMENDMENTS TO THE SPECIFICATION

In the Specification:

BB
5-14-08
Please replace the paragraph beginning on page ~~22~~²¹, line ~~22~~⁶ with the following rewritten paragraph:

-- Fig. 7 details line decoder decoders 104 and ~~106~~. This decoder is capable of selecting an individual line or selecting a pair of neighboring lines. The decoder 104 comprises a pre-decoder 111 and a plurality of row selectors (RSel) 112. Pre-decoder 111 determines which line pairs to activate while row selectors activate the selected rows. --

5-14-08
Please replace the paragraph beginning on page ~~23~~²¹, line ~~18~~²⁶ with the following rewritten paragraph:

-- Thus, if En=0, all of the outputs of line decoder 104 or 106 are logical "0". In other words, setting En to "0" disables the line read operation. This is the default state of line decoders ~~104/106~~ 104 and 106, when there is no active readout. --
